

You are building the **pizza-delivery application**.

Here's the spec from your project:

1. **New users** can be created, their information can be edited, and they can be deleted. We should store their *name*, *email address*, *mobile* and *street address*.
2. Users can **log in** and **log out**.
3. When a user is logged in, they should be able to **GET all the possible menu items** (these items can be in database).
4. A logged-in user should be able to **fill a shopping cart with menu items**
5. A logged-in user should be able to **create an order**.
6. There is an Order menu where u display all the orders.
7. When an order is placed, you should **render the order details and store in the database**
